Housing Market Weakness Depends on Perspective

This week's **biggest housing-related headline** was the drop to a 3-year low in Existing Home Sales. This is just the latest in a series of reports that suggests housing has turned some sort of scary corner. But drawing the line between fear and reality can be a matter of perspective.

Has housing data actually weakened in the past year? Undoubtedly! There's really **no denying or debating** that fact. But home sales dropped in a similar way in 2013 after the last comparable spike in interest rates only to go on to new long-term highs by the middle of 2015.

We **can't really know** if housing will recover in a similar way this time, and that's exactly the point! Nothing we've seen so far is much of a surprise in the context of the interest rate spike. In fact, if anything, the surprise is how **well** housing continued to do after the first phase of the rate spike in late 2016. It wasn't until the 2nd phase in 2018 that sales finally capitulated.

National Average Mortgage Rates

	Rate	Change	Points
Mortgage News Daily			

30 Yr. Fixed	6.43%	+0.02	0.00
15 Yr. Fixed	5.95%	0.00	0.00
30 Yr. FHA	5.82%	+0.02	0.00
30 Yr. Jumbo	6.62%	0.00	0.00
5/1 ARM	6.28%	-0.01	0.00

Freddie Mac

30 Yr. Fixed	6.35%	-0.51	0.00
15 Yr. Fixed	5.51%	-0.65	0.00

Rates as of: 8/30

Market Data

	Price / Yield	Change
MBS UMBS 5.0	99.35	-0.16
MBS GNMA 5.0	99.91	-0.04
10 YR Treasury	3.9039	+0.0424
30 YR Treasury	4.1932	+0.0468

Pricing as of: 8/30 5:59PM EST

Recent Housing Data

		Value	Change
Mortgage Apps	Aug 28	226.9	+0.49%
Building Permits	Mar	1.46M	-3.95%
Housing Starts	Mar	1.32M	-13.15%
New Home Sales	Mar	693K	+4.68%
Pending Home Sales	Feb	75.6	+1.75%
Existing Home Sales	Feb	3.97M	-0.75%
Builder Confidence	Mar	51	+6.25%

Sales vs Rates

Now forget the interest rate considerations above and simply focus on perspective and context. Just by changing the time period on the chart, we can paint **vastly different pictures**. The most downbeat pictures are those that compare current levels to the long-term highs seen in 2017.

Things change as we zoom out to wider points of view. This could still look a bit gloomy depending on your perspective, but much less so than the previous chart:

Existing Home Sales

If we continue to zoom out, the longer-term trend emerges. In this chart, it's actually easier to make a case for housing market **strength**. The red line is a simple linear regression from before the 2000's housing boom. When sales are under that line, it signifies opportunity to improve. Additionally, it's reassuring to see that sales are **not** currently falling from one of their boom cycles (those have been the worst times for the housing market).

Existing Home Sales

Perspective can have an impact on our assessment when it comes to home **prices** as well. The latest home price report from the FHFA (Fannie and Freddie's regulator) was also released this week. Home prices are commonly reported in terms of year-over-year change. This is a useful practice as it allows us to see changes in trends more easily. Here too, we see the ill effects of the 2013 and 2018 rate spikes as well as a potentially ominous ceiling blocking further progress.

FHFA Home Prices

But **let's ask ourselves** if we'd really want home prices to accelerate faster and faster when they've already spent several years in the 5-7% range. That doesn't sound sustainable in an economy where wage growth only recently made it back to 3%. Perhaps **more importantly**, let's ask ourselves why a drop in the pace of appreciation is a bad thing if prices are still moving up. For instance, here's what the same data looks like when we chart the outright level of FHFA's home price index.

FHFA Home Prices

The point of all this is to reiterate that different cases can be made simply by using different techniques to present the **exact same data**.

In **financial markets**, stocks and bonds/rates spent the first part of the week moving lower before bouncing on Friday as odds improved for a temporary re-opening of the government. The temporary nature of the solution likely accounts for the absence of a bigger market reaction. Neither stocks nor bonds were willing to move back to the levels seen after last week's trade-related news.

Next week brings **two key events** that were on the schedule regardless of the shutdown. The Federal Reserve will release an updated policy statement on Wednesday afternoon. They **won't** be raising rates at this meeting. In fact, many investors think we'll see the Fed strike a softer tone compared to December's announcement. Such things are usually good for rates, but if investors were in broad agreement about that likelihood, rates would have already benefited from those expectations.

Then on Friday, we'll get the next installment of the government's official jobs report--always one of the biggest potential sources of volatility for interest rates. As of Friday afternoon, the government hasn't announced a tentative schedule for releasing any of the data that had been on hold during the shutdown.

Welcome to Elite Mortgage!

Welcome to Elite Mortgage!

Our Unique Boutique Mortgage Experience combines elite licensed mortgage professionals, incomparable service, a full array of mortgage products with the most competitive rates in the industry. At Elite Mortgage you're a client, not a number!

We know that each customer has specific needs, so we strive to meet those specific needs with a wide array of products, investment tools, mortgages and best of all quality service and individual attention.

Today's technology is providing a more productive environment to work in. For example, through our website, you can submit a complete on-line, secure loan application or pre-qualify for a home loan. You may also evaluate your different financing options by using our interactive calculators and going over various mortgage scenarios.
